AUDITING, FREIGHT PAYMENT AND REPORTING

Carriers are not perfect.

When you're shipping hundreds or thousands of packages daily, it's a given that some will hit a snag. Whether due to a late arrival or a simple billing error, uncovering these anomalies can reveal thousands in improper payments with potential for reimbursement.

iDrive provides a true carrier agreement rate audit for each shipment by analyzing 42 distinct data points, including the identification of billing errors, reclamation of service guarantees, and cost allocation.

While other audit providers say they offer a "rate audit" they are likely offering a "zero audit," just looking for absent incentives. By choosing iDrive's more comprehensive solution, carriers are accountable to you for the proper rating of each shipment according to your agreement. And just to make your life easier, you can join the dozens of companies that use iDrive's freight payment service to ensure payment and credit accuracy. Auditing and paying the freight carriers has never been easier.

Actionable Business Intelligence: Looking into the Future

iDrive's audit solution isn't merely about looking into the past. Our data management system stores your shipping transactions and provides comprehensive reporting tools with invaluable insight into your shipping characteristics. Our ad hoc reporting allows you to see different trends and detect inefficiencies with your service selections. By using iDrive's auditing and reporting solution, you get enhanced visibility into your transportation practices that will ultimately equate into better decision making and improving your bottom line.

iDrive: stronger audit, easier payment, greater intelligence.
